Smart Fashion Recommender Application

Top 3 Ideas

1. Based on pervious search history:

This feature displays the products based on pervious search history (i.e., Google, Facebook and Instagram) of that particular user and suggest the products in an order according to user interest.

2. User requirements:

The user will login into the website and go through the products available on the website. Instead of navigating to several screens for booking products online, the user can directly talk to Chatbot regarding the products. Get the recommendations based on information provided by the user.

3. location:

This feature takes the location information from the user and display the products related to that location and it helps to save the time instead of searching serval products that are not required for them.
